1 Datos de tiempo

En general esto no presenta mayor dificultad, basta con graficar las variables del circuito que se quieren utilizar en python, despues en la ventana de resultados usar el menu file->export lo cual genera un archivo txt donde la información se de divide en columnas, donde la primera fila son las etiquetas de las variables. El eje x de la grafica siempre es la primera columna

1.1 Estructura del archivo

Etiquetas
Tiempo
Variable 1
...
Variable n
Datos
0
0.159898
...
-14454
1
-0.159898
...
0.14454
...
...

n 0

1.2 Ejemplo

```
import numpy as np
            import pylab
varia=np.loadtxt('curvasdiodos.txt', skiprows=1)
matplotlib.rcParams.update({'font.size': 20,'text.usetex': True})
In [82]:
             figure (figsize=(14,10), dpi=150)
            xlabel('$V_{d}$')
ylabel('$I_{d}$')
             xlim(0,4)
             ylim(0, 0.02)
             plot(varia[:,1],varia[:,0],linewidth=3,label='Ideal')
             plot(varia[:,2],varia[:,0],linewidth=3,label='LED')
            plot(varia[:,3],varia[:,0],linewidth=3,label='1N4148')
plot(varia[:,4],varia[:,0],linewidth=3,label='Schotky')
